CULTURE

Dahlias are at their best during the latter part of September or early in October. To get exhibition blooms, disbud plants up to August 1. Spade or plow the soil 1 foot deep; fertilize with pulverized sheep or cow manure, scatter about ¼ pound of bonemeal around each hill when planting. If soil is very heavy, incorporate a liberal quantity of granulated peat moss. About August 1, apply about ½ pound of high grade fertilizer to each plant and work in thoroughly.

BUCKWHEAT

Plant from June 1 to July 15, 1 bushel broadcast to the acre. **Lb. 10c; bushel of 48 lbs. \$3.00.**

RE-CLEANED CLOVERS

Clovers weigh 60 pounds per bushel

Alfalfa or Lucerne (*Medicago sativa*). Northwestern-grown seed. Sow during April and May, August and September, 25 pounds per acre, preferably with no other crop.

Alfalfa, Grimm. An extremely hardy variety, less apt to winter-kill than older sorts. A heavy yielder and of deep-rooting habit. It requires about 15 to 20 pounds to properly seed an acre.

Alsike, or Swedish Clover (*Trifolium hybridum*). One of the hardiest and most tolerant of adverse soil conditions. Grows from 1 to 2 feet high. Sow early in the spring or early autumn, mixed with timothy, or 10 pounds per acre if alone.

Crimson Clover (*Trifolium incarnatum*). Used principally for soil-ing or green manuring. It is not hardy for more than one season. Height 1 to 2 feet. Sow any time from June to October, 20 pounds to the acre. **Lb. 25c.**

Mammoth, or Sapling Red Clover (*Trifolium pratense perenne*). This differs from the Medium, being of a ranker growth. Sow early in spring or in July and August using 6 pounds per acre.

Medium Red Clover (*Trifolium pratense*). Excellent for hay purposes, usually yielding two crops each year. Sow early in the spring or in late summer—July and August. 6 pounds per acre.

Lespedeza. Japan Clover. A substitute for alfalfa on poor land. Sow in spring, after frost, at the rate of 25 to 35 pounds per acre. Weighs 25 pounds per bushel. **Lb. 20c.**

White Blossom Sweet or Bokhara Clover (*Melilotus alba*). Used either as a feed-crop or as green manure, to plow under. Grows from 3 to 5 feet high and thrives on almost any kind of soil. Sow 15 pounds per acre during spring and fall.

White Dutch Clover (*Trifolium repens*). For Lawns and Pasture. Choice re-cleaned seed. Sow 5 lbs. per acre. **40c per ¼ lb.; ½ lb. 70c; \$1.25 per lb.; 5 lbs. \$6.00.**

COWPEAS

One of the best, largest-yielding, and moist nutritious of farm crops. They provide the most inexpensive method of bringing soil back to fertility, as they grow in the poorest kind of soil, leaving it rich in ammonia. Brown Whippoorwills or mixed, write for prices.

SOY BEANS

This valuable plant enriches the ground by the free nitrogen gathered from the air, which is deposited in the ground by the roots. Fodder is relished either green or dry by cattle.

Black Wilson. An early-maturing (120 days) and the best all-round variety, being a heavy seed-yielder and producing high quality hay.

Mammoth Yellow. Late. Heavy yielder.

BARLEY

Bearded Winter. Needs a rich land and lighter than that adapted to wheat. It should be cut before fully ripe, if for hay, as it is then of better quality, and less liable to shell. Sow 1½ to 2 bushels if drilled; 2 to 2½ bushels broadcast. **Bu. of 48 lbs. \$2.75.**

MILLET, GOLDEN

Can be sown as late as July 15th and yields a tremendous crop. **Lb. 15c; Pk., \$1.50; bu. \$5.25.**

OATS

Swedish Type White and Fulghum. Sow 1½ to 2½ bus. per acre. Price on application.

ORCHARD GRASS

(*Dactylis glomerata*). For early pasturing this is very desirable; also fine for sowing in shaded places. **Lb. 45c; 10 lbs. \$4.00.**

RAPE

Dwarf Essex. This can be pastured 8 weeks after sowing. It must be sown in succession, as the stock eats it close to the ground and it will not stand pasturing any great length of time. Sow 6 pounds per acre broadcast, from April 1 to October 1. **Lb. 30c; 10 lbs. \$2.50**

Seed Rye and Wheat Prices on application.

SUDAN GRASS

An annual, and must be sown each year. Will yield from 2 to 4 tons per acre. Sow in drills, or broadcast, 16 to 24 pounds per acre. Several cuttings can be made from a sowing in one season. Thrives well in a season of drought. 35 pounds per bushel. **Lb. 15c.**

VETCH, WINTER

Sand, Winter, or Hairy Vetch (*Vicia villosa*). Thrives on poor arid, sandy soils. It may be sown either in fall or in spring, mixed with rye, for a support. Grows 3 to 4 feet high and can be cut as soon as the bloom appears and again for the seed. Perfectly hardy. Sow 50 pounds to the acre. Price variable. **Lb. 25c.**

Creeping Bent Grass (*Agrostis stolonifera*). An excellent variety for lawns, succeeding well in moist situations and producing a dwarf, velvety growth. **Lb. \$1.25.**

Fescue, Red or Creeping (*Festuca rubra*). An excellent bottom grass, forming a close and lasting turf. It resists extreme drought and thrives on very inferior soils. **Lb. \$1.00; 10 lbs. \$9.00.**

SEED POTATOES

Maine-Grown

CULTURE—Potatoes do particularly well on sod ground or pasture land, where the turf has been freshly turned. Tubers are usually cut into two-eyed pieces; plant in April in furrows of good depth about 3 feet apart. Scatter a liberal quantity of manure or fertilizer along the drill, and set the seed from 10 inches to a foot apart in the row. Cover with 4 inches of soil, and cultivate frequently after the plants are up. Plant late crop July 1st to August 1st. Eight to 10 bushels will plant an acre.

We can supply the two new varieties of Potatoes: Chipewa for early, and Katahdin for later. Both varieties have unusual merits, and were originated by U. S. Dept. of Agriculture. Write for prices.

We are not quoting prices in our catalog. When ready to plant, write us, and we will then quote you the very lowest prices consistent with the quality of our seed stock.

PLANET JR. HAND WHEEL HOES AND GARDEN PLOWS

No. 12 PLANET JR. DOUBLE AND SINGLE-WHEEL HOE COMBINED

Packed weight, 33 pounds.

Equipment:

- 1 pair of 6-inch hoes.
- 4 steel cultivator teeth.

- 2 leaf lifters.
- All oil-tempered.

The No. 12 is the most popular Double-Wheel Hoe. It can be used by man, woman or boy. It is identical with No. 11, except that the 4½-inch hoes and the rakes are omitted from the equipment, and it is sold at a correspondingly less price. The attachments with it are what gardeners use most, and the short hoes, rakes and any of the attachments can be added at any time. You'll be astonished how easy it is to save time, labor, money and get bigger crops if you use it. **Price \$12.95.**

No. 11—The same as above except that it has one pair 4½-inch hoes, two 3-tooth rakes and two 5-tooth rakes, in addition. **Price \$16.50.**

No. 13—Is constructed the same as the No. 12 (shown above) but has for the equipment one pair 6-inch hoes only. **Price \$9.95.**

No. 19 PLANET JR. GARDEN PLOW AND CULTIVATOR

- 1 2-inch cultivating tooth.
- 1 10-inch sweep.
- 1 plow.
- 1 5-prong cultivating attachment.

15-inch steel wheel

No. 19—This attractive implement is especially designed for the farmer's garden work, though it offers to every one with either field or garden a cheap and effective tool for wheel-hoe operations. The standard is slotted for depth regulation, and an adjustable piece carries any of the attachments that go with the machine. The cultivating tooth does deep work and marks out rows for onion sets, plants, etc. The sweep is fine for level shallow work. The five-prong cultivator attachment is bolted directly to the frame, first removing the S-37 standard. Use the five-prong attachment for deep and shallow cultivation. **Price \$5.75.**

No. 17 PLANET JR. SINGLE-WHEEL HOE

Packed weight 22 pounds.

Equipment:

- 1 pair of 6-inch hoes.
- 3 steel cultivator teeth.
- 1 large garden plow.
- All oil-tempered.

Steel frame
15-inch steel wheel

No. 17 is identical with No. 16, except in equipment, and all that has been said previously regarding Planet Jr. Wheel Hoes is equally true of No. 17. The three sets of attachments which go with it are all the finest of their kind, and make an outfit sufficient for most garden work. You can do more and better work with it in one day than you can do in several days with the old-fashioned hand hoe. The hoes exchange sides to work to or from the row, and change of wheel regulates the depth. The hoes are constantly useful throughout the season. The cultivating teeth are oil-tempered and work admirably, are changeable for pitch and are useful for marking out rows. **Price \$8.95.**

No. 16—The same as above except in equipment, which includes one pair 6-inch hoes. Three cultivator teeth. One large garden plow. One 7-inch rake. One 4-inch rake. One leaf guard. **Price \$10.25.**

No. 17½—Same as No. 17—but without the plow. **Price \$7.95.**

No. 18—Same as the No. 17—but equipment consists of one pair of 6-inch hoes only. **Price \$6.95.**

Rear wheel 11¼ inches in diameter, 2½-inch tread. **Price \$22.75.**

No. 300A—The same as No. 300 except that it has a concave rear wheel instead of the flat faced wheel. **Price \$22.75.**

No. 25 PLANET JR. COMBINED HILL AND

A new and highly recommended method of applying fertilizer to growing crops is to distribute it uniformly on the ground between the rows and to then cultivate it thoroughly into the soil. This insures all the feeder roots growing in the middle of the row getting their share of food. Cultivator closes to 12 inches: Opens to 21.

Simplicity of construction, accuracy and reliability in drop make this machine a superior two-row drill.

It is just as desirable to have the seed properly spaced with unfailing accuracy when drilling as it is to drop three or any other number of kernels in the hill when check-rowing. The No. 919 Drill easily satisfies the most exacting requirements.

No. 1441—Right, Chilled. Weight 384 lbs.....	\$67.75
No. 1442—Right, Chilled. Weight 376 lbs.....	66.75

This is acknowledged to be the lightest-draft plow of its type. It does an extra good job of plowing in any kind of soil and under all conditions. It runs level and plows at uniform depth, always even when turning square corners. It's the all-wheel-carried plow that has established its superiority wherever the use of this type of plow is practical. The advantages over the ordinary sulky plow are many. The special design of rolling landside, and the fact that the plow can be used with either the Syracuse or John Deere clean-shedding bottoms are features responsible for the extremely light-draft and good working qualities. The rear weight of the plow is supported by the rolling landside, which serves as the third leg of a triangular rolling support. All of the body and frame weight is properly balanced and rolls on three bearings that run in oil. Thus, friction between the plow and the bottom of the furrow is eliminated, and the side pressure against the furrow wall is minimized. Shares stay sharp longer than on any other riding plows, because the rolling landside prevents the plow from running on its nose. Neither is there any dragging friction, which is equally destructive to share life and light draft. The outstanding feature that is found only on this plow, is the front furrow caster wheel that actually governs the plow; the controlling device that automatically keeps the plow cutting furrows at uniform width and depth at all times.

Long, conveniently-reached levers make it easy to control depth and leveling accurately.

The power-lift is simple, and positive. It will stand the hardest, roughest work. It will last far longer than any ordinary power lift.

The land wheel, from which the power-lift operates, is solid and straight from tire to box on the inside; it does not pick up dirt or trash, thus it is a natural protection to clutch and driving parts. On a half turn of this wheel, the bottoms lift high and level—no digging into the ground or clogging with trash when turning the ends of the field.

When the bottoms are lowered, they enter the ground point first and penetrate quickly to plowing depth.

JOHN DEERE MODEL B DISK HARROW

Independent action of the gangs is largely responsible for the flexibility of the Model B. This construction is of great value because it allows one part of the harrow to pass over an obstruction in the field without interfering with the rest of the machine. A rigid harrow, under the same conditions, is likely to leave some of the land uncultivated.

The Model "J.B." is a double-action disk Harrow available in 5-, 6-, 7-, 8-, 9-, and 10-foot sizes. Model "J," available in the same sizes, is a single-action machine—the front section of the Model "J.B." used alone. To angle gangs, just pull a single trip rope.

Because of their outstanding design, these new Disk Harrows successfully meet two entirely different field and crop conditions. It's extremely easy to do good work and do it faster with one of these New Harrows. Gangs are angled and straightened by Tractor Power controlled from the Tractor Seat. To angle gangs, just pull a single trip rope.

JOHN DEERE MODEL K. B.—AUTOMATIC TRACTOR CONTROL DISK HARROW

Front and rear gangs can be angled or straightened independently of each other. A pull on the trip rope enables the tractor operator to change the angle of either section instantly to just the proper degree for best disking results.

SYRACUSE LEVER SPRING TOOTH HARROW

The frame bars of angle steel, thoroughly protected by steel shoes, which double the life of the harrow. Inside frame bars raised at the end, giving free outlet to trash. Frame with small opening in front, absolutely preventing loading at this point, which is so common with other makes. The tooth bars are of channel steel journaled in the malleable brackets above the frame which gives the teeth high support and great range or adjustment for depth of cultivation and clearance. Spring teeth of high carbon steel, without bolt holes, and held by malleable holders, allowing for separate adjustment when worn. By use of the levers the teeth can be readily set deep or shallow, or can be thrown out of the ground to clear off trash and for dragging harrow from one place to another. Central and direct draft without side motion; adjustable hitch, so that the teeth at the front and rear can be regulated to work at the same depth. No spring-tooth harrow made is giving such universal satisfaction.

JOHN DEERE SELF-DUMP STEEL HAY RAKES

In light or heavy hay, while raking into windrows or bunching—in all conditions—the John Deere Self-Dump Sulky Rake does a clean job of raking and dumps easily. Even in exceedingly rough ground, it is giving remarkable satisfaction to users the country over. Its better performance makes a place for it on every farm.

One trip across the field on the John Deere will convince you that there's a big difference in sulky rakes. It will also make you realize, beyond all doubt, that the John Deere has the features for which you have long been looking—clean raking and ease of operation in varying conditions, and a sturdiness that means long life.

JOHN DEERE SIDE-DELIVERY RAKE WITH FLOATING CYLINDER

The smooth, flexible motion of the floating cylinder causes the hay to be "floated" into loose, fluffy windrows. The hay is handled more gently than it possibly could be with a rigidly-mounted cylinder, the windrows are more open and airy to permit the rapid evaporation of moisture by the free circulation of air, more of the leaves are saved, and the color is preserved, resulting in a higher quality of hay.

A Simple, Labor-Saving Method

Making hay with the aid of the John Deere Side-Delivery Rake requires but little more effort than driving a team or a tractor.

One man with this rake does all the work which, in the days of hand rakes and pitchforks, required the efforts of a small army of men and women, boys and girls.

JOHN DEERE RAKER BAR AND CYLINDER HAY LOADER

Full-Floating Gathering Cylinder

This is the only loader that has the full-floating gathering cylinder used in combination with the raker-bar elevation. The floating cylinder is not a new idea on a John Deere loader. This feature was first introduced 45 years ago on the John Deere Double-Cylinder Loader and, since then, has been largely responsible for the success of John Deere Loaders. It is especially valuable when the loader is used with tractor. Because the flexibly-mounted cylinder floats, it automatically adjusts itself to the uneven ground surfaces and gets all the clean hay regardless of how rough the field may be. Once the cylinder is adjusted for the volume of hay to be gathered, it isn't necessary to make further adjustments in the field to take care of variations in the ground surface—the self-adjusting spring-mounted cylinder takes care of that. No time is wasted by the tractor operator in getting off and on the tractor to make adjustments in the field, as he would if the cylinder were rigidly mounted. The result is better work and cleaner raking without the teeth digging in.

The special springs which control the opening at the lower end of the compressors give the proper pressure to both large and small quantities of hay as it is delivered to the carrier.

Seed is Covered Properly—Rapid Growth is the Result.

Every kernel or seed is conveyed by metal tubes from the feed to the bottom of the furrow before any soil can drop back. The seed beats the dirt. The Van Brunt Disc Drill boots make this possible. They are brought forward so that they lie entirely within the surface of the disc. The seed passing through does not come in contact with the upturning disc surface.

JOHN DEERE CORN BINDER

Famous For Its Better Work Under
Difficult Field and Crop Conditions

Positive Delivery of Stalks to Binding Attachment

Lodged and tangled corn is readily picked up by the gatherers. The gatherers are wide at the points and can be accurately set at any desired distance from the ground.

As the corn enters the gatherers, four chains carry the corn to the binding attachment. In addition, two top gather chains with long lugs help to keep the tops straight and assist in forming well-shaped bundles. The two steel throat springs, adjusting themselves to any volume of corn, hold the corn into the chains.

The butt chain is equipped with long, wide folding lugs that extend across the throat of the machine and prevent the butt end of the stalks from lagging.

JOHN DEERE WAGON Built Up to a Guarantee

JOHN DEERE
MOLINE, ILL.
THE TRADE MARK OF QUALITY
MADE PARTLY BY GOOD BY LINDSEY

With Wood or Steel Wheels

Made from selected first-class hard wood. Hickory axles. The gears are rigidly braced, fully clipped over bolster and axle. Heavy round truss rods. The front hound is of heavy angle steel, reinforced with wide oak filler extending from point of hound to rear of axle and sandboard. Bolsters ironed full length on top and around ends; bolster stakes, 11 inches over all, farm wagon style, with rings and side braces. Heavy drop pole, with farm wagon style of pole cap. Skein, heavy truss pattern, carefully set with correct pitch. Size of skein 3¼ inches by 10 inches.

Low down Construction is one of the important advantages of this All-Steel Gear. The rated capacity is 4,000 lbs. but the maximum capacity is much greater. It is available in the standard 56" track or 60" wide track. By merely moving a bolt, you can telescope the reach to any length between 6 ft. 10 inches and 10 ft. 10 inches between bolsters. The tubular reach is exceptionally strong and adequately braced—front and rear axles are kept in perfect alignment at all times. Will not buckle when backing with a heavy load. The wheels run on removable steel sleeves. When worn, these sleeves can easily be replaced at small cost by the owner without

special tools. This feature is highly important. By simply replacing the old sleeves with new ones, the wheel bearing can be kept just as good as new. A round tubular-steel pole is furnished as regular equipment, bolsters are strongly built of one-piece high-carbon steel. Write for special pamphlet which describes the above more fully.

Evenly Distributed Heat. Two powerful fully enclosed heating elements provide plenty of heat throughout the length of the brooder. A red glow lamp prevents cannibalism and permits night feeding. These lamps operate separately from the heat unit. An outside pilot light tells when heat elements are on.

Automatic Temperature Control. Your desired temperature is maintained by a positive thermostat control. Switch is bakelite sealed, protected from dust and moisture. Current cuts in or off when temperature lowers or raises 3 degrees. No radio interference. Heavy insulation is metal bound. Insulation is moisture-resisting and helps reflect heat rays downward into the brooding area.

Easy to Use, Convenient. Handy inspection door. Plenty of room inside for feeders and fountains up to 2-gallon size. Detachable heavy duck curtain is sanforized, won't shrink. Adjustable legs allow extra head room as chicks grow. Hover slopes to prevent roosting. Shipped partly set up in carton, complete directions for setting up included. LAWN SEED

RICHGREEN LAWN GRASS SEED

Yearly comparative trials have proved this strain to be unsurpassed for first-class, permanent lawns. Only the finest varieties of suitable grasses are used and the seed is re-cleaned until it is free from chaff and weed seeds.

This seed will produce a green, smooth, deep-rooted, velvety sod with a thick bottom, free from the common grasses which produce clumps and knots on the lawn. It is used extensively on the finest estates to produce those exquisitely smooth, rich green sweeps of lawn which are so much admired. **Lb. 50c; 3 lbs. \$1.40; 5 lbs. \$2.25; 10 lbs. \$4.15; 20 lbs. \$8.00; 100 lbs. \$38.00.** Delivered free in United States by parcel post, freight, or express, our option.

SUPERFINE LAWN SEED

This is a correct combination of triple refined imported and domestic grasses, including a liberal proportion of Bent Grass, producing a rich green turf. **Superfine** is undoubtedly the finest Lawn Seed available in this country or abroad. One pound will sow an area of 200 square feet. **Lb. 65c; 5 lbs. \$3.00; 10 lbs. \$5.75; 20 lbs. \$11.00; 100 lbs. \$50.00.**

SHADY PLACE LAWN GRASS MIXTURE

Will quickly produce an abundant and even growth of beautiful green grass in shade, and as it blends well with our Richgreen Lawn Grass Seed it may be used on those portions of the lawn which are shaded by trees, buildings, etc., thus covering the whole area with a rich green sward. **Lb. 65c; 3 lbs. \$1.90; 5 lbs. \$3.00; 10 lbs. \$5.75; 20 lbs. \$10.50; 100 lbs. \$48.00.** Delivered free in United States.

LAWN GRASSES should be used at the rate of one pound to 200 square feet, 100 lbs. per acre. Very much better results can be had from lawn seeding if it is done early in the spring just as soon as the soil can be conditioned, so as to allow ample time for development of a healthy root growth that will survive summer heat. **DO NOT** expect to have a good lawn on poor worn out soil. You must use lawn food.

SANDY SOIL LAWN GRASS
